Foreword

Archbishop Alex Thomas
Caritas Zimbabwe
Bishop President

“Faith by itself, if it has no works, is dead” (James 2; 17). Caritas as the developmental arm of the Catholic Church exists to manifest faith in reality at good times as well as bad times. Zimbabwe is prone to many natural disasters like drought, food shortage, flood, storms etc. time and again. The experience of Cyclone Idai was something beyond our imagination and capacity. With swift action on time Caritas Zimbabwe with the assistance of Caritas Mutare,

Masvingo and Harare was able to be very effective in the rebuilding of the destroyed infrastructure in many villages as you will read in the reports narrated here. As a Church organization, it is our bounden duty to restore dignity to people, assure them hope and accompany them in their daily lives. At the same time, it is our God given task to take good care of the environment in every way possible. Caritas always remains with the community at all times in this process.

In this regard I would like to applaud the efforts made by the staff of Caritas and Catholics across the country in working as a family and team. Our funding partners were very generous and resourceful in many ways in capacitating Caritas Zimbabwe in their efforts. It was a job well done. Together we continue to do many things and together we can do more. The report presented in the following pages speak volumes of all the work that was done and being done in the process of restoration in affected areas of Cyclone Idai. With gratitude to God and to all our well-wishers we present to you this report. May God bless you all for the good work you do.

Acknowledgements

Marius Zibgwi
Caritas Zimbabwe
National Coordinator

I wish to draw the reader of this magazine to reflect on the quotation below.

“The joy and hope, the grief and anguish of men and women of our time especially the poor and afflicted in any way are the joy and hope, the grief and anguish of the followers of Christ as well’ - Vatican 11, Council, Gaudium et Spes (1965).

As the development and socio - pastoral arm of the Catholic Church in Zimbabwe, Caritas has

the mandate to fulfil the Church's charitable obligation to be witnesses of God's love to humanity particularly when the poor and afflicted are in grief and anguish. It is against this background that we are called to love and serve the suffering souls of the victims of Cyclone Idai.

Let me begin by thanking Br. Alfonce Kugwa (SPB), the National Coordinator for Social Communications (SOCCOM) and his team for the production of this Magazine. My sincere thanks goes to my fellow Caritas National office staff, Diocesan Caritas Coordinators and staff for implementing the cyclone Idai response project. My gratitude also goes to the Government of Zimbabwe through their local authorities and line ministries for supporting the project starting from the initial rapid needs assessment, response planning, and monitoring of the emergency response, more importantly for providing, the much-needed enabling peaceful environment for the project. At national level, the Civil protection directorate did a tremendous job in prompt clearing of some donations from abroad.

Caritas operates under the Zimbabwe Catholic Bishops' Conference (ZCBC), therefore this project could not have been successful without the guidance of the Caritas Zimbabwe Bishop President –Archbishop Alex Thomas of Bulawayo Archdiocese and his Executive committee who on behalf of the Bishops Conference gave the enabling organisational policy guidance. I wouldn't forget the day to day support given by Fr. Fradereck Chiromba, the ZCBC Secretary General in the work of implementing the Emergency Appeal in the cyclone Idai affected areas.

The wonderful work presented in this magazine is a result of the funds raised through the emergency appeal launched by the National Caritas with the technical support of In-country CIMOs (Trocaire, CRS, Cordaid) with CAFOD being the facilitating partner and the overall blessing by Caritas Internationalis (CI). After the appeal launch, various generous hands including the Holy Father-

Pope Francis and the In-country CI member organisations (CIMOs) were among the first to save the desperate situation during the first phase after the disaster. Compelled by the Catholic Social Teaching of solidarity, many Catholic friends came in to donate in kind and cash. Among the philanthropist were the faithful from Zimbabwe's 8 dioceses who were a testimony of the local church's capacity to contribute towards disaster response. Some Zimbabweans from the diaspora's Catholic communities could not ignore the suffering of their fellow country men and women as they also came in to salvage the situation with different assortments necessary to restore dignity for the affected families. The Catholic communities of Zimbabweans working in South Africa and Australia were such good examples.

The table below shows the geographical coverage of the project and Key planned activities and achievements:

The table below shows the operational wards in the 7 Cyclone Idai affected districts.

Restoring dignity through love

Caritas seeks to restore dignity through love which is expressed by its interventions alleviating challenges that affect humanity.

When Cyclone Idai struck Zimbabwe and its neighbouring countries Mozambique and Malawi, many lives were lost, property destroyed and sourced of livelihood vanquished. Communities and families were left desperate for

food, safe and clean water, shelter and general sanitation. Crops and livestock were swept away, houses and toilets collapsed and water sources were heavily contaminated leaving people with no option except to draw the precious liquid from littered

Cyclone Idai caused a lot of untold suffering among communities in Zimbabwe and Caritas through the CI Emergency Appeal has reached out to assist the victims.

sources. This exposed the affected families in Chikomba, Buhera, Chipinge, Chimanmani, Bikita, Zaka and Gutu districts to serious food insecurity, diseases and general poor sanitation threatening various protection issues.

According to UNICEF Cyclone Idai Situation Report #2 (15-24 March 2019), the unexpected tropical Cyclone affected people as follows:

SITUATION IN NUMBERS

250,000 People affected by Cyclone Idai/Floods

120,000 Children affected by Cyclone Idai/Floods

154 Deaths reported (Source: DCP-March 2019)

189 People missing (Source: DCP-March 2019)

Listening to stories of suffering, starvation, anguish and trauma from the victims, one would barely control tears from dropping as the genuine testimonies, sounding like fiction, pierce heart and soul.

“We were left with completely nothing. No food, no water, no clothes or blankets to keep us

warm and nowhere to go as it was water everywhere. Our houses were razed to the ground bringing an unexpected reality, a reality that I never imagined, that of counting stars in the night as we slept in the open. We also lost our relatives who were swept away by high waves of water and they were never found,” said a survivor of the Cyclone in Chimanimani.

The government was left with no option but to declare Cyclone Idai a national disaster. This opened doors for other countries, civic organisations, non-governmental organizations, government departments, churches, groups and individuals to donate goods and services to the affected families. While most of the goods donated were to cushion those affected in the short term, more needed to be done to restore the dignity of those families and communities.

Caritas whose love knows no boundary, creed, colour or race, was part of the solution in providing long range and lasting solutions through its Cyclone Idai Response themed: “Building Back Better” which emphasised

reconstruction of solid and durable latrines, incinerators at health institutions, houses, as well as rehabilitating boreholes and drilling new ones. In Chimanimani, Caritas rehabilitated and protected water springs to make sure that water points are secure and free from interference from litter or wildlife.

Caritas' intervention to “build back better” targeted construction of houses, household latrines, institutional latrines, rehabilitation of boreholes and drilling new ones rehabilitation and protection of water spring, family wells, livestock and food security. All these projects were well coordinated and supported by government local authorities and line ministries who were involved from project planning, monitoring and evaluation. At community level, beneficiaries were actively involved in mobilising of locally available materials and labour. In all situations, a complain handling mechanism was set through provincial, district and traditional leadership structures where beneficiaries could channel their concerns over and above the suggestion boxes.

The Shindi's Experience with Cyclone idai

Mr. Patrick Shindi and wife Christine pose for a picture in front of one of their houses that was destroyed by Cyclone Idai.

Construction of family houses and latrines

The effects of Cyclone Idai reached as far as Chikomba District in Mashonaland East Province under the Archdiocese of Harare where houses were destroyed causing untold suffering to families. Caritas' intervention through the Cyclone Idai Appeal traced those whose houses and latrines were destroyed in an effort to provide better shelter and sanitation.

Mr. Patrick Shindi (59) of Gumbe village in Chikomba District testified to the role played by Caritas in alleviating his family's plight after the Cyclone Idai disaster. Mr. Shindi whose three houses and a toilet were razed to the ground had to sleep in the open while he had to

secure accommodation for his four children in the neighbours houses. While he suffered a huge blow from the collapse of his houses, he also lost food to the Cyclone as grain and mealie-meal was also affected by the torrential rains leaving them scrounging for what to eat. Mr. Shindi and his wife Christine were short of words as they described Caritas' generosity in restoring their dignity through provision of decent accommodation for them. Now the Shindi's are proud owners of a two bedroomed flat, a round kitchen hut and a state of the art family latrine that they never imagined to have had it not been of caritas' intervention.

Mr. Shindi said Caritas supplied them with the building material and communities provided labour supported voluntary local builders in the construction of the houses. Mr. Shindi expressed gratitude to Caritas for their timely intervention as the family was in a serious quagmire and between a rock and a hard place. On a monitoring visit to Chikomba, Caritas found the Shindis engaged in a happy mood than ever and had brewed traditional opaque beer popularly known as 7-days or *Ndari* for purposes of income generation. Mrs Shindi said the proceeds from the 7-days brew are meant to pay school fees for their children and to cater for other family needs.

Caritas Zimbabwe National Monitoring, Evaluation and Communications Officer, Shadreck Gwari, chats with the Shindis during a visit to assess the completion of the new houses built for them by Caritas.

Caritas reaches out to Juliet

Juliet Mushoriwa is a proud beneficiary under Caritas' Cyclone Idai “Building Back Better” programme. Mushoriwa is one of the many beneficiaries who got household latrines from Caritas after the destruction by the tropical cyclone. Mushoriwa who lives in Macdell North B in Gutu District was lucky to be among Caritas beneficiaries who received strong and better latrines from the organisation's intervention. Mushoriwa who is a widow and survives on communal farming said Caritas showed her love that she never expected after the disaster. When the family's' latrine collapsed, Mushoriwa and her two sons had to use alternative means to relieve themselves. Other beneficiaries under this project in the area include Tsitsi Gondongwe, Mufandaedza Tazarurwa, Tendai Zindikani, Muchaneta Mangoro and Madhibha Beatrice. Caritas provided the beneficiaries with building material comprising of cement, roofing sheets, brick force, trusses while the community provided own labour. The government Environmental Health Technicians supervised the construction of the toilets making sure that all standards were met.

Juliet Mushoriwa and her neighbours demonstrate hygiene practices at her newly constructed latrine courtesy of Caritas.

Rebuilding Institutional Latrines

The Headmaster of Tonhorai Primary School, Mr. Cainos Nyoni shows the new block of latrines built by Caritas after Cyclone Idai.

We have new latrines courtesy of Caritas

Pupils at Tonhorai Primary School enjoy the comfort of new toilets.

Because of the devastating effects of Cyclone Idai, many schools in Chimanimani, Chipinge, Buhera, Chikomba and Masvingo had their infrastructure destroyed. Most of the schools' latrines collapsed leaving children to resort to the bush to relieve themselves. This saw Caritas coming in to build institutional latrines for schools to enhance children's hygiene. One good example is Tonhorai Primary School where Caritas helped build ten squat hole latrines with a disability compartment

to accommodate learners living with disability. This is in line with the government's policy on inclusive education.

Tonhorai Primary School which is located in ward 20 of Chimanimani is one of the many beneficiaries of Caritas after the school's toilets collapsed due to Cyclone Idai. The headmaster, Mr. Cainos Nyoni could not thank Caritas enough for its generosity towards the school after their predicament in March 2019.

“Tonhorai Primary school is highly

***Thanks you: Learners express their gratitude to Caritas
for constructing new latrines.***

grateful to Caritas for this kind gesture of constructing the learners' friendly toilets with a disability compartment. Caritas supplied all the building material including money to pay the builders. Construction started in November and ended in December 2019. We had everything we needed that is why the job did not take long. Had it not been for Caritas the young learners would be using common toilets which are not safe for them," said Mr. Nyoni.

Mr. Nyoni reiterated that his school had no capacity to rebuild the toilets in such a short time under the country's harsh economic conditions. This is compounded by the fact that Tonhorai Primary School is located in

a drought stricken area where rains are always scarce and harvests are erratic with only 45% of the parents able to pay school fees for their children. He said, the school presented their problem to the District Civil Protection Committee who Caritas to assist in the project.

The school toilets for both teachers and students were heavily damaged by the cyclone that they also need attention. The school whose enrolment is 750 with 23 teachers had limited ablution space that learners and teachers had to wait for one another or use alternative means to relieve themselves.

Mutsambwa Primary School gets state of art latrines

Pictures show the newly completed latrines at Mutsambwa Primary School in Zaka under the Diocese of Masvingo. Below is a latrine for children with disabilities.

Mutsambwa Primary School in Ward 2 of Zaka District under Chief Nhema was not spared by Cyclone Idai. The latrines at the school were damaged while others overflowed as water filled them up. The school had one of its blocks' roof blown away. The Headmaster, Mr. Elisher Munzwa and his deputy Mrs. Jane Muzinda praised Caritas for intervening and rebuilding better and nicer 10 separate squat hole latrines with two for the disabled learners. Caritas gave the school all they needed in terms of building material while the parents provided

labour. “This is a pleasing achievement for the school as it improves the health situation at our school. We are very grateful for the intervention by Caritas. We are very much impressed as Caritas considered those learners with physical impairment by building two toilets for children with disability, one for boys and another one for girls,” Mr. Munzwa said.

The school which has 743 learners and was built in 1918 is proud to have these new ablution facilities. Mr. Munzwa said the old latrines were wrongly cited that's why they

The Deputy Headmaster, Jane Muzinda posing for a picture close to the newly built latrines.

were filled with water during the cyclone. He said they are a threat to the welfare of the learners as they can collapse any time. Although the latrines were condemned by the Ministry of Health and Child Care, the school continues to use them as they do not have enough ablution facilities.

Above: Mr. Munzwa shows disused toilets at Mutsambwa Primary while below, a group of learners appreciates Caritas for the job well done.

Water And Sanitation

Borehole Drilling

Life Changing Experience

As

Village Gets Clean Water

Water is precious and there is chaos when all wells run dry. The coming of Cyclone Idai exposed people to health hazards as sources of water were contaminated. A population of about 700 people under Sabhuku Hakuna in ward 5 of Buhera had to walk a distance of more than 5km in order to get safe and clean water. According to Village head Hakuna, people in the area never new a borehole as they used to fetch water for domestic use in Mwerari and other nearby rivers. With the coming of the Cyclone Idai, the

areas' sources of water were contaminated that people had to walk long distances to get the precious liquid. This exposed the community to serious health challenges of cholera, diarrhoea and typhoid.

Headman Hakuna also cited climate change as causing serious shortage of water in the area. He pointed out that the place used to be water logged in the past but that has completely changed and the place has become so dry.

The shortage of water in the area

Two women celebrate at a borehole site protected by thorn branches after drilling at Hakuna village, Buhera.

heavily impacted on women who had to travel long distances to fetch water for domestic purposes and for children to bath. At each borehole, water point committees were established for sustainable management of the facility and also, committee members were trained in Participatory Health and Hygiene Education (PHHE).

“This really affected women as they would walk very long distances to fetch water sometimes with children at the back while pregnant women also suffered the same fate. Also

children were affected as they needed to bath before going to school,” said Sabhuku Hakuna.

The community welcomed Caritas' intervention with open hands stating that the borehole will go a long way in improving the local people's livelihoods and hygiene. The community already have plans to set up a livelihoods and nutrition gardens which will serve to provide vegetables and raise income for their families.

The Councillor for Ward 5 under Headman Mugwenhi in Chief

Makumbe's area, Jane Ziki appreciated the role that Caritas was playing in saving lives. Ziki cemented the fact that the place had no clean water since time immemorial and that the intervention by Caritas will have touched her and will transform the lives of people in the community. The Councillor urged Caritas to intervene in other places of her

constituency that are dry and need water. Caritas Mutare, Field Officer, Jean Banda said Caritas was drilling and rehabilitating boreholes in five Wards in Buhera:

- Kusotera village - Wards 5
- Mbenjani village - Ward 12
- Mudzingiri village - Ward 22
- Mashonganyika village – Ward 23
- Ushehwawanda village - Ward 27.

Headman Hakuna said his area never had a borehole and the one drilled by Caritas is the first in his life time.

Councillor for Ward 5, Jane Ziki, thanks Caritas for drilling a borehole in the Ward.

Water, a source of

unity

and

community

development

Water, a source of unity and community building

Smiles at Mashonganyika village along Save River as Caritas drills a borehole for the community

In Mashonganyika village under Chief Nyashanu along Save river in Buhera, the arrival of borehole drilling equipment attracted dozens of people, wearing wide smiles, coming to witness the drilling of their borehole through the intervention of Caritas. “

The borehole will provide water to 378 households under Mashonganyika village. People in the area used to draw water from unprotected sources such as well and Save river. Village Head Mashonganyika said Caritas has brought them a new era and new enlightenment as the borehole will reduce waterborne diseases that used to affect his people. He stated that the water is further contaminated by fish poachers who use poisonous substance to kill fish and people drink from the same river.

“Water in Save river is not safe at all as it is

contaminated by fish poachers who use poison to kill fish. People also bath and wash their belongings in the same river while animals drink from there as well. This borehole will be a source of clean water and livelihoods for the local community,” said Mashonganyika adding that more projects will be realised through the availability of this borehole facility.

Mashonganyika also mentioned that clean and safe water was guaranteed as quality testing was done. Headman Chirozva said the water point will enhance health and hygiene for the community and their domestic animals. He said the borehole will serve to promote unity, reconciliation and community building as people will be drawing together through livelihoods projects.

Chirozva highlighted: “This facility will improve sanitary conditions in households. It will lessen the burden for

women and children who always have to toil to get water for domestic and other purposes. This is also a sign of development in Mashonganyika village and surrounding areas because with water it is possible to embark on other developmental projects. The District Development Coordinator for Buhera, Freeman Mavhiza, described the work by Caritas Mutare as one of the best among Non-Governmental Organisations operating in the area under the Cyclone Idai Appeal.

“Caritas is one of the organisations that positively responded to the government's call after the effects of Cyclone Idai. They built household and institutional latrines, drilled and rehabilitated boreholes, distributed food to the affected families and above that they are building 303 houses in the four wards of Buhera South. All this is good work that Caritas Mutare is doing in supporting vulnerable people and communities,” applauded Mavhiza adding that the relationship between Caritas and the government of Zimbabwe was commendable as technical teams were invited in the implementation of projects by Caritas.

Buhera District Development Coordinator, Freeman Mavhiza commended Caritas for the good work in the district.

Village Head Mashonganyika standing at the peg of the community borehole while on the left, two women could not miss the occasion of the borehole drilling.

Protection of water springs

Under the Cyclo Idai Response programme, Caritas Mutare went on a drive to protect water springs that were heavily contaminated by all kinds of dirty as a result of heavy rains that flooded Chipinge, Chimanimani, Masvingo, Chikomba and Buhera. The Field Officer for Caritas Mutare, Jean Banda said Caritas chipped in to protect water springs that had been contaminated during the Cyclone Idai disaster, thereby exposing people to unsafe water. A total of 30 water springs were protected in Chipinge's Wards 15, 17 and 19 while another 30 were protected in Chimanimani.

Residents of Barauta village now have safe and clean water after their spring was protected.

The villagers of Barauta expressed gratitude that at last their spring was protected through the help of Caritas who provided the necessary building material to secure the water point. The villagers are proud that they participated in the protection of their spring as they gathered stones and sand that was used in the construction process. Chengetai Hliwayo, a resident of Barauta village said when Cyclone Idai hit their area, bottles, leaves, carcasses, stones, sand and logs filled their spring that the water was

too dirty for human consumption.

“We had to dig on the side or first remove the dirty stuff before we could get water. But when Caritas came, they protected our only water sources that we now have clean water,” Hhliwayo said.

Before the protection of the spring, there was high level conflict between humans and animals like dogs, pigs and cattle as they all flocked to the unprotected water point to quench their thirst. The Barauta spring supplies water to the villagers, the business community and Mt. Selinda

Water brings many opportunities for women

High Schools. Caritas also protected Tsokobishi spring also in Barauta village where strange red caterpillars swam in the water causing fear among the villagers. According to Mrs Sangu Sigauke,

the caterpillars were a threat to human health and with the protection of the spring by Caritas, the community now enjoys safe and clean water.

Mrs. Sangu Sigauke washes her hands at Tsokobishi spring in Chipinge.

**Avaibility of
water
increases
learning
time,
improves
pass rate
at school**

Learners at Makwau Primary school enjoy safe and clean water after Caritas installed a solar pump for the school.

While buildings crumbled, roofs got blown away and people were left stranded, Makwau Primary school's borehole pipes collapsed leaving the school without water for months. Truly, a Cyclone can bring different forms of suffering. Both teachers and students contemplated on where the school would get water. Little did they know that a "Good Samaritan", Caritas was coming with a better and technologically advanced solution to their problem. Instead of reinstalling the usual and commonly used hand pump, Caritas installed a solar pump and erected water tanks at Makwau Primary, a school back of the beyond

in Zaka District.

Caritas Masvingo Field Officer, Ngonidzashe Chuma, said they had to respond to the plight of the school whose borehole had collapsed after DDF called upon them to assist.

"Both teachers and students had a serious challenge of where to get water. The idea of putting a solar pump was to reduce the distance that the students walked to fetch water at the expense of their study time," Chuma said.

The solar pump that is placed at the site of the collapsed borehole lies some 1.5km from the school and that is where students and teachers previously fetched water. Now, this is a thing of the past as Caritas introduced piped water

at the school saving on lesson times for the students thereby improving the school's pass rate. Makwau Primary School Head, Alphonse Shoshore expressed: "This saves a great deal on the learning time for students who had to fetch water every morning thereby compromising their study time. This is definitely going to contribute to the school's pass rate." As the school is on a feeding programme, the students were losing more of their academic time as they

were requested to fetch water to prepare their meals. Shoshore acknowledged that lack of piped water at the school led to child abuse/labour by teachers who used students to fetch water for them. According to Shoshore, availability of water at the school has improved students' health and sanitation and contributes to reduction of diseases as they are encouraged to wash their hands all the time after visiting the toilet.

The Headmaster of Mutsambwa Primary School, Mr. Alphonse Shoshore with teachers, students and representatives of Caritas in front of the newly installed tanks.

Integrated water, food security & livelihoods

Manyengavana village is found in Ward 22 of Bikita District. Residents of the village were thrown into desperation when their only borehole that provided safe and clean water collapsed. The borehole also supported Tevera horticultural garden project with 37 households. All this was thrown into shambles when the borehole collapsed during the Cyclone Idai disaster in March 2019.

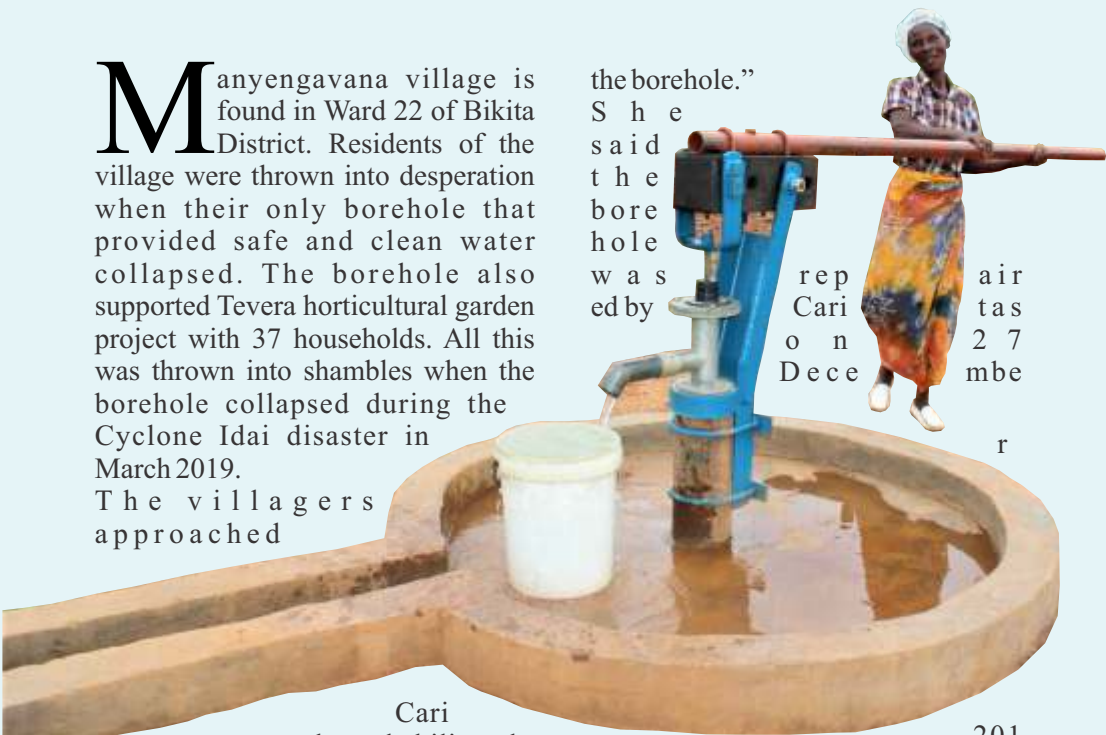

The villagers approached

the borehole.”

She said the borehole was abandoned by

representatives of Caritas on December

201

Caritas

who rehabilitated the borehole by providing the head cylinder, GI rods and GI pipes.

According to the chairperson of the borehole committee, Mavis Rushiri, the borehole and garden project serve to unite people in the village as they come to share their commonality and concerns.

Rushiri said: “While the borehole provides safe and clean water, it also serves to bring people together in a developmental process. Imagine when 37 families meet to work together, they also develop themselves economically, politically and socially while they also find solutions to their problems. This is what we encourage when we meet at

9 as the committee had no money to fix it on their own.

Rushiri requested Caritas to go a step further and provide a solar pump for them so that they maximise their horticultural production.

The chairperson of the Tevera Garden project, Esnath Gudo confirmed that the breakdown of the borehole had exposed her community to poor health as people were drawing water from Mutora river lying some 5km away.

“This affected us women and children as we are the ones who need water most. We thank caritas for coming to our aid by rehabilitating our

Residents of Manyengavana village celebrate the resuscitation of their borehole by Caritas. The borehole also serves to water their livelihoods garden below.

borehole,” Gudo reiterated.

The committee has a constitution on how to manage the affairs of the borehole and Tevera garden project. They have started contributing \$RTGS1 per family per month from their garden towards sustenance of the borehole.
